

How to merge CSV files in the current directory

```
# set a variable to know if a file is the first one
# because we don't want to skip the head line from the first file
first=1
# for each of *.csv file names, assign it to i
for i in *.csv; do
    # if you repeat this script, we don't want to merge
    # the previously merged file again
    if [ "$i" = "merged.csv" ]; then
        # skip this file
        continue
    fi
    # if this file is first
    if [ $first -eq 1 ]; then
        # print everything
        cat "$i"
        # subsequent files won't be first anymore
        first=0
    else
        # for non-first files, skip the first line
        tail -n +2 "$i"
    fi
done > merged.csv # forward any outputs from the above for loop
                  # to merged.csv
```
